

#AL2801

THE MINI BEAST

The Mini Beast is a “true trickle filter” for ponds. Unlike any other filter in the pond industry, this work of art is equipped with patented plastic media, built from cast acrylic, comes complete with drip trays, easily and inexpensively discarded dual pre-filters, a spray bar, 1” inlet and outlet, and a safety overflow. This unit easily handles any average pond. Combined with a quality pump, an Aquarium Life Support Systems Intake Screen, and a Danner Mfg. UV Sterilizer, we can say you will have a clear water experience. This ‘little brother’ of the Pond Beast is more easily hidden and handles ponds to 2000 gallons. Requires 350-800 gph of flow.

Standard Features:

- Easy, above-ground installation & maintenance
- High surface area for biological filtration
- Increased oxygen levels
- Higher redox potentials
- Flow rates to 800gph
- Safety overflow
- Ample room for filter media
- Easily supports UV sterilizers & filter pleats
- Lifetime Warranty

Specifications:

Dimensions: 16 x 12-1/2 x 15-1/2”

Inlets: (1) 1”

Outlets: (1) 1”

Handling capacity: 2000 gallons

Recommended Flow Rates: 800gph

MINI BEAST & INTAKE PACKAGE #AL8475

Purchase the Mini Beast and Intake Screen at the same time and get special pricing on this great combination of filters.
