

## UP100/PS COMBINATION SIPHON BOX AND PROTEIN SKIMMER

The UP100/PS is a great filter and protein skimmer combination for a small saltwater aquarium. Special features of this unit make it completely unique to skimmers in this category. The inner black box surface skims aquarium water then water is protein skimmed with a large venturi skimmer that has its own venturi pump. The skimmer chamber has room for most submersible heaters. A separate pump (included) returns the water to the aquarium through an Advanced Return. Water is passed over fine filter padding removing bubbles and debris then through two more media chambers before returning to the aquarium. The UP100/PS can be easily modified for use as a siphon box by adding a one inch tank adapter to its bottom. This combination siphon box/protein skimmer is adaptable to any changes you make to your system over the years. Two pumps are included. One for protein skimmer and one for tank circulation.

Dimensions: 12 X 4-1/2 X 15-1/4"

## CORNER OVERFLOW BOXES FOR DRILLED TANK ASSEMBLY

**#AL2216**

These 6 x 6" overflows come with our two standard "Easy Clean" screen slots and are cut to your height specifications. We recommend having them made 1/4" shorter than the underside of the tank trim. This provides a safety overflow if the screens are not cleaned and became clogged. The corners of the overflows may need to be trimmed to allow for silicone seams in glass tanks. Mount unit to clean glass with aquarium silicone. Place silicone on the edge of the overflow and mount, pressing the the unit firmly into the corner of a clean, empty aquarium. Run an additional bead of silicone on the inside of the box and on the outside and clean accordingly. Refer to the silicone instructions for drying time prior to exposing to water. 3/4 " long, 1/4 " wide routed slots.

- We can not be responsible for prefilters that have been cut to your specifications and do not fit.
